The use of l', n' and t' in Russian and Bulgarian (where they are not transliterations of a single letter, but merely l, n or t followed by the soft sign) is included to emphasize the fact that they are used for single letters only in Serbian.

Shch and sht invariably represent the letter Щ in Russian and Bulgarian respectively, since the pairs of letters ( ШЧ in Russian and ШТ in Bulgarian) seem never to occur consecutively in the respective languages.

The above table is reproduced, by permission, from the pamphlet "The Transliteration of Russian, Serbian and Bulgarian for Bibliographical Purposes" published by The Royal Society, Burlington House, London, W. 1 (February, 1953, price 1s. 0d.). It represents the system at present in use in "Science Abstracts" for the transliteration of the names of journals and the names of authors of articles abstracted.

# LIST OF JOURNALS

The periodicals and serials listed below are all, except those marked*, scanned regularly and fully for material of value for abstracting in either Section of Science Abstracts. Those marked* are not necessarily scanned regularly; in some cases, all but a few issues may have been scanned, but in others only a single reprint may have been received, or an abstract may have been reprinted from another abstracting periodical.

The list includes those periodicals from which all articles in each issue are invariably abstracted, but they are also listed separately at the end (**"Journals abstracted completely"**).

Some of the abstracts are reproduced, with permission, from other abstracting periodicals (as indicated at the foot of the abstracts), and in these cases the name of the abstracting organization may be given in place of the address of the original journal, where it has not been possible to determine the latter. Further enquiry should be made from the abstracting organization named; addresses are given at the end of the list (**"Abstracting journals"**).

Abstracts are published only of articles which are believed to be in general circulation, and which should therefore be available in national and scientific libraries, or from the publishers, whose addresses are given in this list. Application should not be made to "Science Abstracts" for copies of the full text of any of the articles abstracted, or for translations. No abstracts are published of documents whose circulation is restricted in any way, nor of oral communications of which no printed record exists.

For the benefit of those who are unfamiliar with the form and purpose of such abstracting periodicals as "Science Abstracts", it may be said that each abstract is a summary of an article (or book) published elsewhere, the title of the article (or its English translation) being given at the beginning of the abstract. The "reference", printed immediately after the title and author, gives the name and date of the journal where the article was printed and the appropriate pages. In general, title, author and reference are usually required for the unambiguous identification of an article (e.g. in a bibliography), though the reference alone is sufficient for the location of the article. For books, the town of publication, the name of the publisher, and the year are given in the reference.

The form of the "reference", giving volume number, issue number, pages and date, will, it is hoped, be self-explanatory. It should be emphasized that the date given refers, in nearly every case, to the "issue" or "number" containing the article abstracted; in some cases, particularly when papers are issued separately, the "volume" when bound may bear a different date. The date given is that recorded on the issue, not the actual date of publication or receipt, unless so stated. When the volume carries no number, the year is given in its place.

If no indication of language is given in the abstract, the article may be assumed to be in English. This does not necessarily hold, however, for abstracts reproduced from other abstracting periodicals giving no indication of language.

*Journals marked thus are not necessarily scanned regularly

# JOURNALS ABSTRACTED COMPLETELY

The following list gives the names of those journals whose scientific contents have been completely abstracted in "Physics Abstracts" in 1964. Since nearly all journals occasionally publish items of a non-scientific, transient or trivial character, which it is neither appropriate nor desirable to record among the abstracts of serious scientific communications, a certain amount of discretion must be allowed in the interpretation of the phrase "completely abstracted". Items such as editorials, obituary notices, announcement of meetings, descriptions of commercial products, and so on, have usually been passed over, and when these occurred the journal was not literally abstracted completely in the sense that every line of print was covered. Nevertheless, within the discretion of the editorial staff of "Physics Abstracts", all serious scientific communications were covered, whether original or review articles, and including also letters and short notes (though not necessarily minor notes on laboratory arts or manipulations).

Some of these journals publish a small proportion of articles on subjects not normally considered to come within the field of interest of "Physics Abstracts". They are all recorded and indexed, in accordance with the undertaking given above, but in some cases only the titles of the articles are given. The number of such articles is too small to weigh against the inclusion of the corresponding journals in the list, particularly those of national physical societies.

The following list gives the names of those journals all of whose scientific and technical articles are at present being abstracted in "Electrical Engineering Abstracts".

Matter such as literature reviews, descriptions and specifications of commercial instruments, personal notes, introductory articles, and so on, is not abstracted.

The absence of a title from the list does not exclude the possibility that the contents of the journal are also being abstracted completely in the sense indicated above, and in such cases the journal titles will be added to the list in due course.

# AUTHOR INDEX

For the sake of simplicity and uniformity, all names beginning with articles or prepositions are listed as if written as single words, regardless of nationality (e.g. Van Vleck is listed as if written Vanvleck). Cross-references are included in appropriate places. Compound names are generally listed under the last component, unless hyphenated; exceptions to this rule are appropriately cross-referenced.

All names are reproduced in the abstracts and the index with the same spelling as in the original articles; in the case of articles printed in Cyrillic characters, a letter-by-letter transliteration is given, in accordance with the scheme given at the beginning of this volume of "Science Abstracts". Russian authors' names may appear in Latin–alphabet publications in various forms, due to the use of different transliteration schemes; these names are reproduced as printed in the articles abstracted.

In anticipation of reprinting the entries in future cumulative indexes, the Abstract Number given with each entry below incorporates the final digit of the year of publication in "Science Abstracts". The headline at the top of each page supplies the remaining digits to complete the year (1964), and indicates the section (Physics Abstracts). Thus "4=1234" in this index means "Abstract 1234 in the 1964 volume of Physics Abstracts".
